

## **The Three Observable Trends in the City School Data:**

In conclusion, the three trends to take note of here are as follows:

1. Overall, schools that have a higher budget did not yield the best results. In comparison, schools with a higher spending per student (\$645-675) underperformed compared to the schools with a smaller budget (<\$585 per student).
2. Overall, smaller and medium sized schools drastically outperformed larger sized schools in math (89-91% passing vs 67%).
3. Overall, charter schools outperformed the public district schools across all metrics. There is a possibility that charter schools may serve smaller student populations per school.
